## **Clinical Example**

## **Breast Pre-MDT Triage Meeting**

- North Manchester

- Via Standardised proforma
- Clinicians can identify suspected benign pathology at referral

Patient referred onto MDT

MDT Agenda Finalised

 "Benign Section"

- Average number of discussions per week = 53
- Number removed from plenary MDT = 12 (22%)

- 1 x surgeon
- 1 x radiographer
- 1 x MDT coordinator
- 1 x CNS

Pre-MDT Triage Meeting

Reassured and Discharged if concordant and benign – communicated straight away

If not concordant

 referred to the plenary MDT

Opportunities to reduce numbers further with implementation of protocolisation of care – "Standards of Care"
