

# Greater Manchester Breast Cancer MDT Standard Care Plan 1

## POST OP: EARLY BREAST CANCER PATIENTS

A select group of patients who have had surgery for early invasive ductal carcinoma of the breast can avoid a full post-operative MDT discussion and be placed on this Standard Care Plan. Please follow the flow chart below and treat accordingly.

Any patient placed on this Standard Care plan should still have their treatment outcome noted by the MDT coordinator in the same way used for all cancer patients.

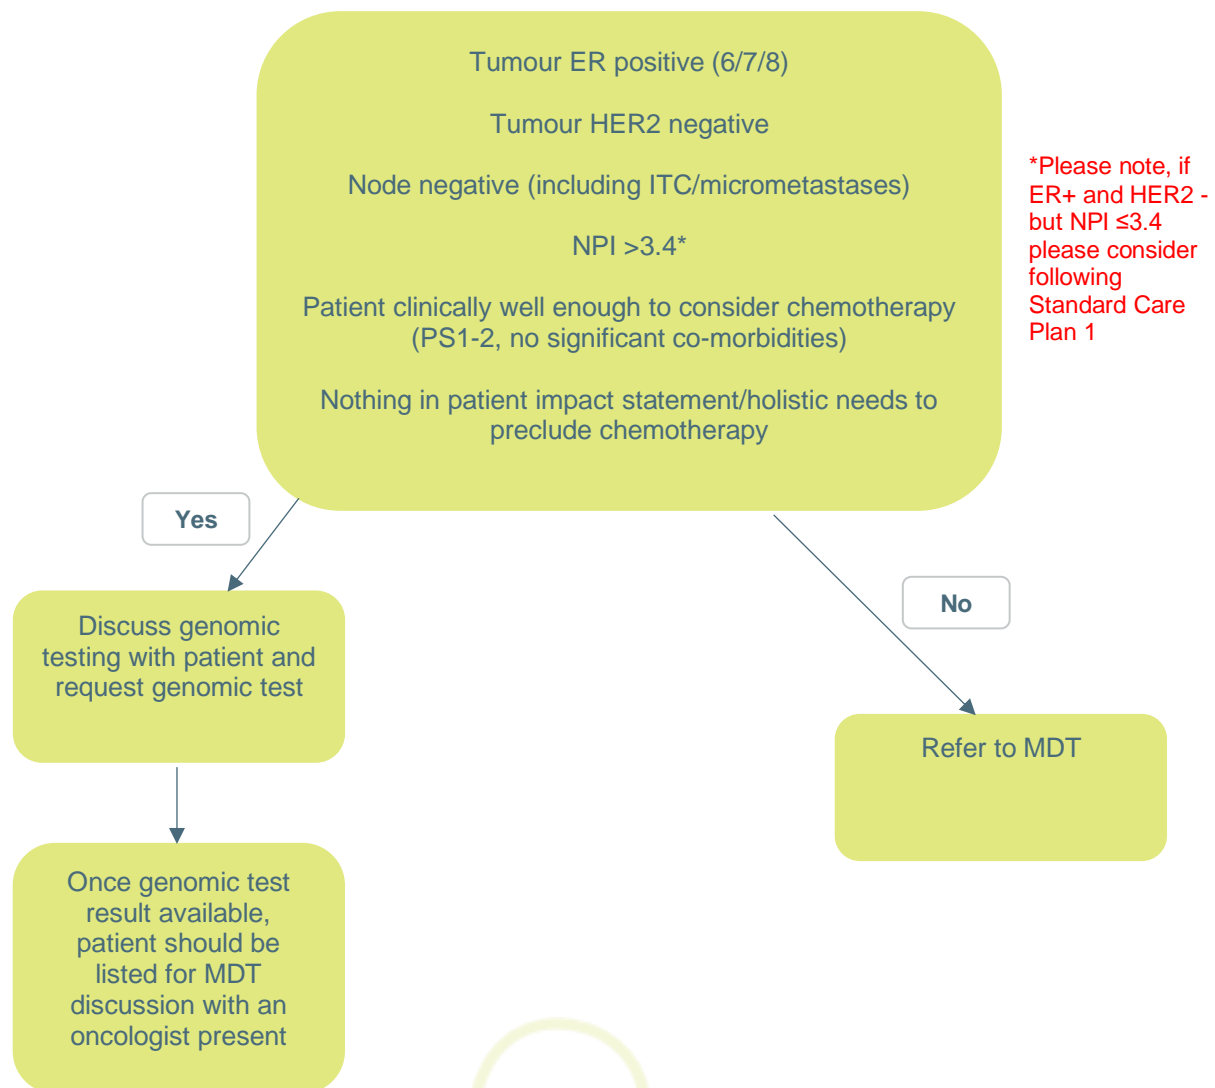

If any clinical concerns about whether the patient meets the criteria, please refer to the MDT

## Greater Manchester Breast Cancer MDT Standard Care Plan 2

### POST OP PATIENTS SUITABLE FOR GENOMIC TESTS

A select group of patients who have had surgery for ER + / HER2 – node negative breast cancer will benefit from a genomic test prior to adjuvant therapy decision making at the MDT. Using this algorithm will avoid repeated MDT discussions in this patient group .

Any patient placed on this Standard Care plan should still have their treatment outcome noted by the MDT coordinator in the same way used for all cancer patients.

## Greater Manchester Breast Cancer MDT Standard Care Plan 3

### PRE-OPERATIVE MANAGEMENT OF HER2 POSITIVE BREAST CANCER

A large number of patients diagnosed with HER2 positive breast cancer will benefit from neoadjuvant chemotherapy.

Any patient placed on this Standard Care plan should still have their treatment outcome noted by the MDT coordinator in the same way used for all cancer patients.
