

## The Hive of Cancer Education

Authors: Molly Pipping, Tilly Hewitt, Suzanne Lilley

### Elevating cancer care: we exist to inspire educate and improve

Part of the Workforce and Education Programme at Greater Manchester Cancer Alliance, the Academy offers quality assured education and training across all care settings, professions and cancer pathways through a blended learning approach. Hosting our own professional development tool to log learning achievements, the ePortfolio is the perfect component to support workforce retention and progression.

### 23-24 was all about establishing the Cancer Academy as a sustainable, business as usual programme following a successful pilot period within the urology specialty.

Over the past 12 months there have been some notable milestones through the quality assured education we offer, such as: piloting the skills lab concept, hybrid Psychological Level 2 training, collaborations with Higher Education Institutions like Manchester Metropolitan University, and work with charities including the LGBT Foundation.

A new approach to communication skills training is now in circulation, leveraging technology to deliver AI-drive experiential learning with digital humans.
