GM Cancer standard template

High Grade Non-Hodgkin's Lymphoma – Post Treatment

Remove all wording that does not apply to a particular patient in order to personalise it to the individual.

If you need to localise this treatment summary, e.g. job titles do not match those used in your Trust or adding your Trust logo, please do so, but please retain all other information.

Remember to ensure sections don't overrun onto the next page or titles separate from the body of the text before sending.

Font should be Arial size 12

For GP use only: please code this letter as cancer treatment completed:

Snomed code 413737006	Cancer hospital treatment completed (situation)	
8BCF.00	Read	Cancer hospital treatment completed

Please take this with you to any planned or emergency visits to hospital. It could help the doctors and nurses with your care.

Dear **[INSERT PATIENT NAME]**

Please find below the summary of your diagnosis and ongoing management plan for your haematological malignancy. A copy of this has also been sent to your GP. This plan is specific to your needs and has been designed to increase your knowledge and wellbeing as you move forward in your cancer care.

Please remember that if you do feel anxious or would like further advice or to talk through a concern or symptom at any time you are welcome to contact your treating team. They are there to support you and know about a wide range of resources and services that have been designed to help you.

Your Key Contact Numbers:

Clinical Nurse Specialist	Name: Contact Number:
Cancer Care Coordinator/ Cancer Support Worker	Name: Contact Number:

Please note that there is no haematology service at the weekend/bank holidays. If you require immediate support, please call NHS 111, or the district nurses (if you have a designated district nurse) for advice. If you feel you need more immediate attention, please attend your local Accident and Emergency Department.

Diagnosis and Treatment to Date:

Diagnosis:	High Grade Non-Hodgkin's Lymphoma	Date of Diagnosis:	
Stage:		Treatment aim:	

Summary of Treatment and relevant dates:

Please be specific and give full information on detail, dates and intent, avoiding jargon.

Current Medication:

Secondary Care Ongoing Management Plan (tests, appointments etc) [Delete AS APPROPRIATE]

Your Haematologist will discuss your out-patient follow up with you. You can usually expect to see your doctor or a member of the team as described

- 2-3 monthly in the first year following your treatment
- 3-4 monthly in the second year following your treatment
- Ongoing monitoring dependent on signs of any disease progression but may extend up to 6-12 monthly

At these appointments you will have some blood tests and a physical examination.

Additional investigations may be required if there are signs of recurrence or late effects of your treatment.

Possible treatment toxicities and/or late effects from the treatment(s) you have had [Delete AS APPROPRIATE]

You have now completed a course of treatment for a high-grade non-Hodgkin's lymphoma. For the majority of patients, the treatment will have been given with the intent to cure the disease. Most people in remission will be healthy and have few problems. You may however have developed some side effects from your treatment which will require ongoing monitoring. In addition, a few people will have some health problems that can affect them after the treatment has finished. These are called 'late effects'. Your treatment summary is designed to help you and your health care professionals to monitor for any of these problems, which in some cases can occur several years after your treatment has ended.

Am I at risk of late effects?

The risk of late effects depends on a number of different things including the types of drugs used, dose of drugs and the number of cycles. For radiotherapy it depends on the part of the body treated and the dose. It can also be affected by things like your general health and lifestyle, e.g. smoking will put you at more risk of several types of late effects.

Your follow up plan is designed individually. You may not need all the tests listed below and your specialist team will recommend which you may require, either as part of your hospital follow up or with your GP.

Heart - cardiac monitoring required

Details:

Lungs - Lung function tests required

Details:

Kidneys - eGFR monitoring required

Details:

Thyroid – TFT monitoring required		Details:
Fertility		Details:
Other organs -		Details:

Symptoms of possible recurrence that will require investigation.

If you develop any of the symptoms below, in-between your regular clinic appointments, you should contact the department for advice:

- Unexplained weight loss
- Severe night sweats (drenching the bed)
- Swelling of your glands
- Repeated infections
- Unexplained bleeding/bruising
- Itch
- Bone pain

Summary of the consultation about your cancer and future progress

Please avoid medical jargon.

You will need lifelong blood parameter monitoring and the need for treatment will be an ongoing assessment. We have made you aware that this disease carries a small risk of transformation to a more serious bone marrow condition.

Personalised Care for Cancer:

Access to Health and Wellbeing Information and Support is a continuous element of your care. Your Support Plan can be reviewed at any point if you feel your needs have changed. Please contact your Clinical Nurse Specialist for information on support available or if you have any questions or concerns.

General Information relating to your lifestyle, wellbeing and support needs:

People who have had treatment for haematological cancers are at a higher risk of developing other cancers. This can be related to the chemotherapy and radiotherapy you have had, but also a number of lifestyle choices can affect your ongoing health and wellbeing. Patients with myeloproliferative neoplasm's are also at increased risk of developing blood clots.

Your specialist team will advise if you need any specific monitoring but in general:

- **Stopping smoking**

If you are a smoker, giving up smoking will improve blood circulation, lower blood pressure, reduce the risk of a stroke, improve your immune system (ability to fight infection), and help to improve your breathing or stop it from getting worse.

- **Take care in the sun and keep your skin covered or use a high SPF sunscreen.**

Managing your wellbeing: Looking after yourself in good times and bad

We can all struggle on a day-to-day basis. Dealing with a diagnosis of cancer and undergoing treatments can be particularly challenging and it may add an additional level of complexity in looking after yourself when you are not feeling your best. You may notice that you are more worried and stressed than usual, or you may feel sluggish and low. Adjusting and adapting to everything you have been through can take time, and sometimes it needs a bit of extra support and effort to figure out how to be okay when life is proving challenging.

Exercise and Physical Activity:

It has been proven that engaging in regular exercise or physical activity (ideally 3 times a week) can address feelings of anxiety, experience of fatigue and low mood. It can also improve heart health, muscle strength and maintaining a healthy weight. Even a small amount of physical activity is helpful if you are able. You may

need to change the type of activity you do to your specific needs and limitations, so we advise talking to your GP before you start. Please visit www.prehab4cancer.co.uk for more information and helpful resources.

Eating Well:

Eating a healthy balanced diet is an important part of maintaining good health and can help you feel better. This means eating a wide variety of foods in the right amounts and maintaining a healthy body weight. Depending on the surgery you have had on your bowel you may need additional advice and support to achieve this.

Reducing alcohol to within safe limits:

The current UK guidelines to keep health risks to a low level for both men and women are to avoid or not to regularly drink more than 14 units a week (6 pints of average-strength beer or 10 small (125ml) glasses of low-strength wine).

If you would like more help and advice, please speak to your Haematology Team.
